PROJECT

PERSONAL PORTFOLIO |

Project description:

This is a project to design and build my portfolio website that have all details information about my skill and experience ,project . Recruiters can view the Home page with interactive UI design and animation, go to the details pages through animated Navigation bar which are looking fantastic. By the help of this portfolio website recruiters can contact me through various mode of contact .

- Built the framework of application using **HTML5** and **JavaScript**.
- Designed **CSS3** templates for use all pages on portfolio with position, text, border,margin,padding.
- Hands on using **Bootstrap** templates for interface component such as contact form.
- Designed reusable component and major pages with navigation bar using **React JS**.
- Hands on designing responsive design for devices with different screen size using **JavaScript**, such as dynamically generating font size, design using rem and **Web Design- Media Query**
- Using **React JS** Spring animation interactive UI design.
- Using **React JS** router Dom the multiple pages link by navLink.
- Using **NPM (Node Package Manager)** for **JavaScript** package management.
- **useState Hook** function have been used in my portfolio to move navigation elements.
- Using **React Icons** library import the icon into my portfolio.
- With the help of **EmailsJS** create multiple contact options like (WhatsApp,Email,Messenger).
